MORBIDITY DATA FOR INDIVIDUAL STATIONS WITH STRENGTH OF 500 OR MORE	27

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualls, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

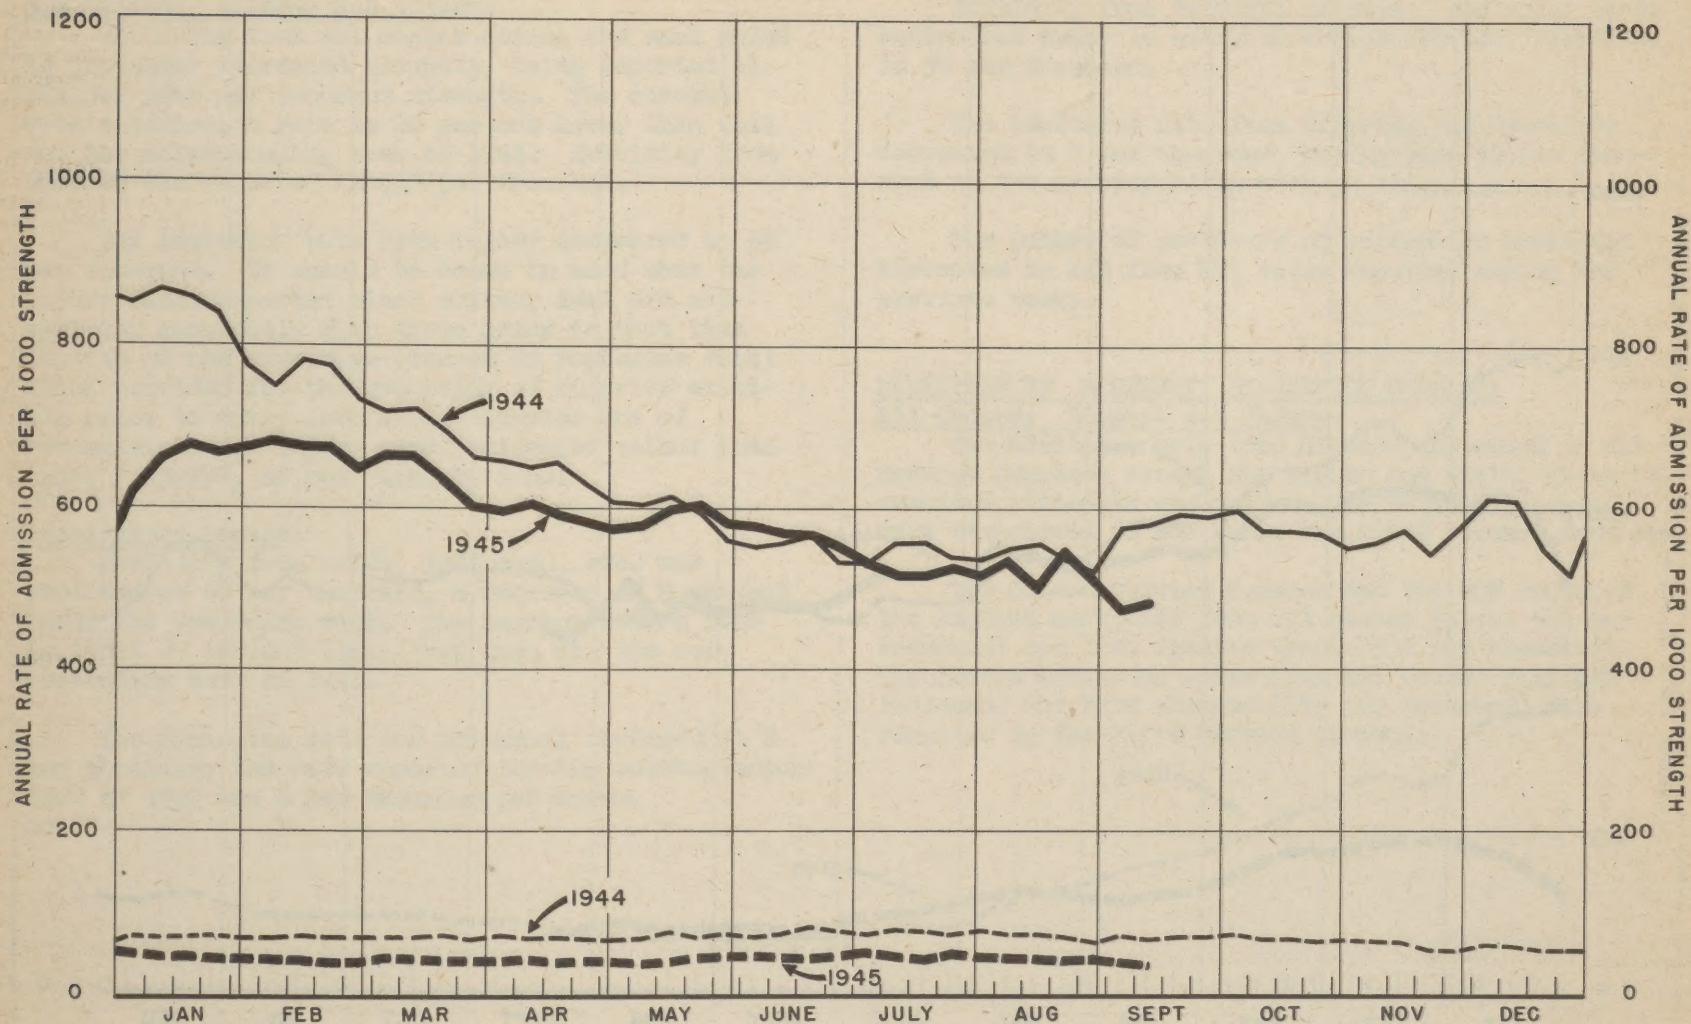

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

All Causes: Disease and Injury:

Morbidity from all causes during the week ended 14 September increased slightly, being reported at 482 per year per thousand strength. The current week's admission rate is 20 percent lower than that for the corresponding week of 1944. Morbidity from disease was reported at 447 per thousand.

The admission rate from injury decreased to 35 per thousand. It should be borne in mind that the injury rates reported since October 1944 are not strictly comparable with those prior to that time because of the directive (issued 29 September 1944) which provided for the reporting of injuries existing prior to entry into active service and of readmissions for injury under "disease" rather than under "injury", as was formerly done.

Respiratory Causes:

Morbidity from colds, influenza, etc. was reported at 66 per thousand, a decrease of 8 percent under the preceding week. The current week's rate is about 27 percent lower than that for the corresponding week of 1944.

The admission rate for pneumonia remained at 8 per thousand; the rate reported for the corresponding week of 1944 was 6 per thousand per annum.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding cases contracted prior to entry on active service, increased to 57 per thousand.

The admission rate from diarrhea and dysentery decreased to 7 per thousand, having been 10 per thousand in the corresponding week of 1944.

The number of new cases of infectious hepatitis increased to 247 from 177 cases reported during the previous week.

VARIATION IN MORBIDITY BY SERVICE COMMAND

All Causes: Disease and Injury:

The admission rate from disease increased in all Service Commands except the Eighth and Ninth, where it remained virtually unchanged. The largest increases were registered in the First and Third Service Commands.

The Second Service Command and the MDW reported the highest morbidity from all causes (about 560 per thousand) and from disease (about 530 per thousand). The lowest admission rates from all causes (415 per thousand) and from disease (393 per thousand) were reported by the First Service Command.

NON-EFFECTIVE RATE

CONTINENTAL UNITED STATES

PATIENTS REMAINING UNDER TREATMENT

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS (CONT'D)

The Fourth and Ninth Service Commands reported the highest morbidity from injury (41 and 40 per thousand respectively). All other Commands reported rates of less than 40 per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc. decreased in all Service Commands except the First and Ninth. The MDW reported the highest morbidity from these causes (90 per thousand), while the lowest was registered by the First Service Command (49 per thousand). All Service Commands except the MDW had rates of 75 per thousand or under.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases increased in all Service Commands, except the Fifth, Seventh and Ninth, where the rates decreased slightly. The highest morbidity from these causes was in the Third Service Command (89 per thousand).

Low morbidity from diarrhea and dysentery was reported in all Service Commands, with none reporting a rate in excess of 10 per thousand, except the Fifth, with a rate of 14 per thousand.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 25.7 per thousand strength for the week ended 14 September as compared with 30.9 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 79.0 per thousand troops in this country.

PATIENTS REMAINING UNDER TREATMENT: 14 September 1945:

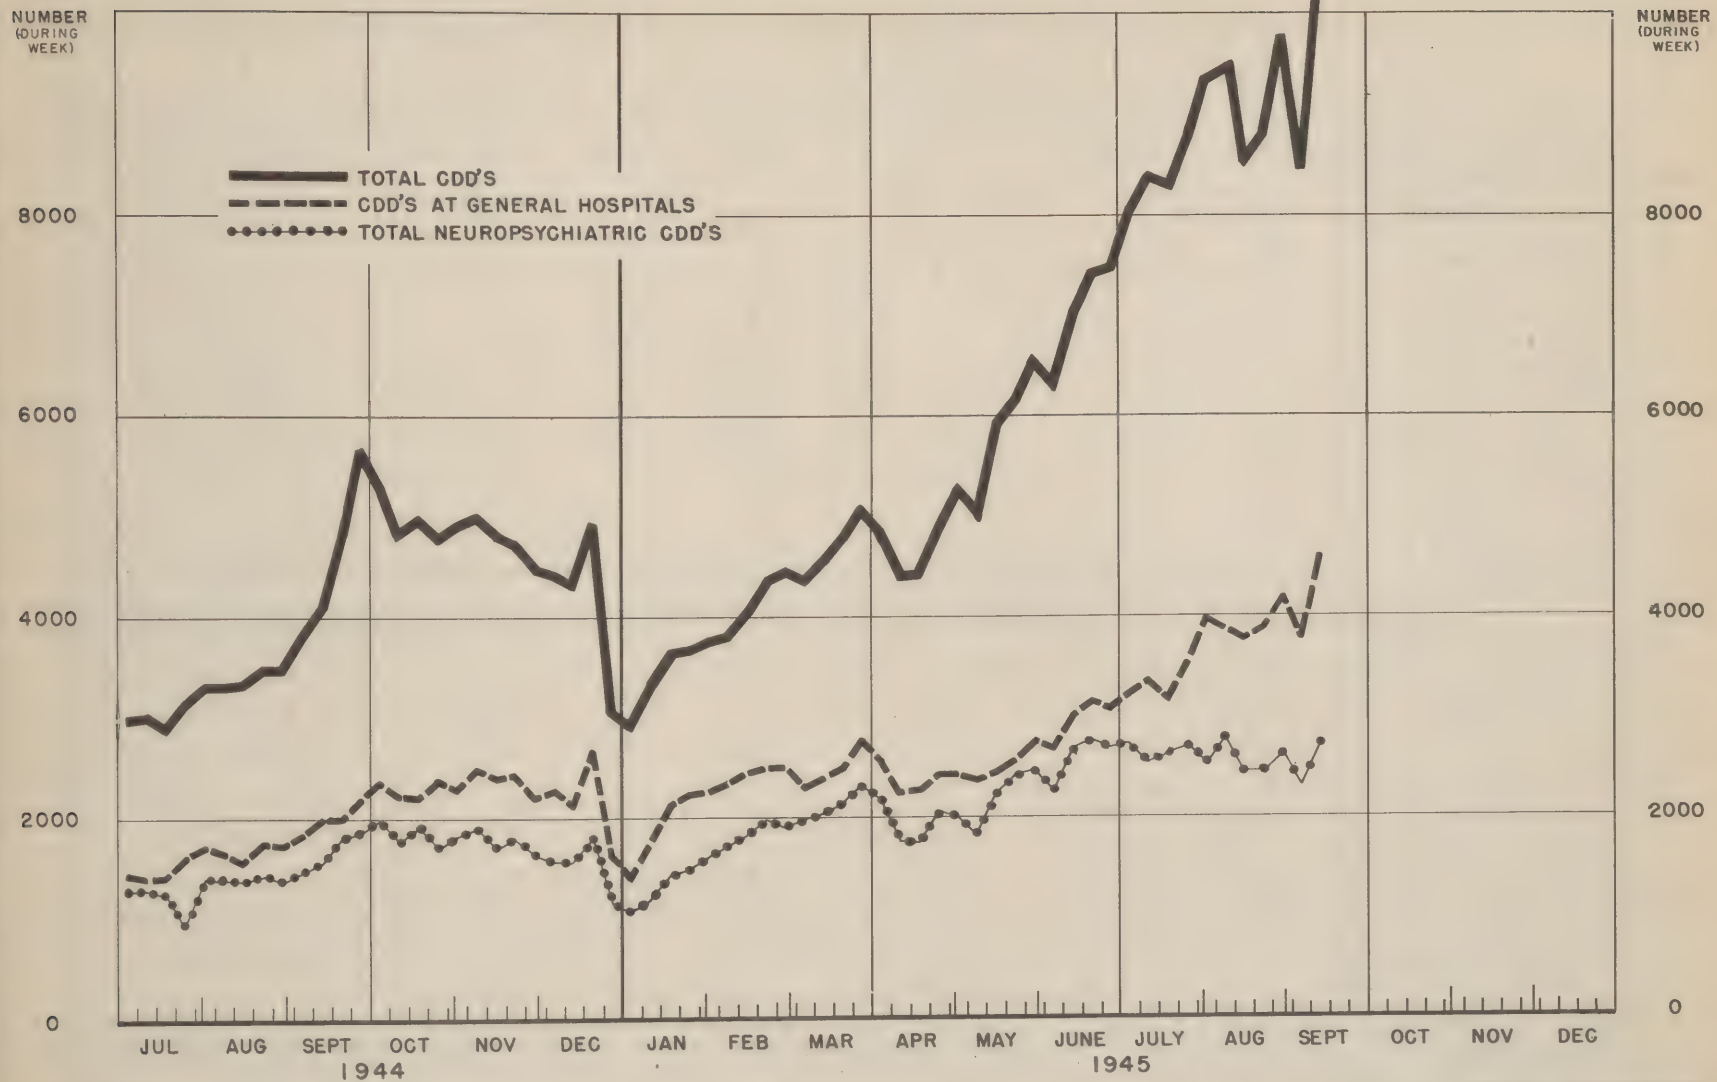

The number of neuropsychiatric cases remaining was 31,060 or about 1200 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 45,000. The number of battle casualty patients remaining decreased by about 3500 to number 92,401.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

In the week ended 14 September there were 10,418 enlisted personnel discharged by CDD, or about 2,000 more than during the previous week. Forty-four percent of these discharges were reported by General Hospitals and 37 percent by Convalescent Hospitals. Included among the 10,418 CDD's were 2727 neuropsychiatric cases.

FORM SG-902 - 8 July 1944

- 22 -

ARMY SERVICE FORCES
OFFICE OF THE SURGEON GENERAL
MEDICAL STATISTICS DIVISION
HEALTH REPORTS BRANCH

PRISONERS OF WAR

During the five-week period ended 31 August the admission rate from all causes among prisoners of war was 561 per year per thousand strength which was about 7 percent higher than the corresponding rate for U.S. troops in this country (see chart on page 25). The admission rate from all diseases combined for prisoners of war was 479 per thousand, or substantially the same as that for U.S. troops, while the admission rate from injury for prisoners was 82 per thousand, or about 45 percent higher than for U.S. troops.

Morbidity from disease among prisoners of war was about 5 percent lower during August than in July. Morbidity from injury decreased slightly in August under July.

Over 98 percent of the total strength of the prisoners of war in the continental United States (as reported by The Provost Marshal General) is included in the reports received in the Office of The Surgeon General. The strength not reported represents largely prisoners in penal and medical institutions and those en route from ports of debarkation to prisoner-of-war camps for whom no reports are submitted. It should be noted furthermore that the strength figures shown in the following tables are the mean strengths for the period indicated and not the strengths as of the end of the period.

Italian prisoners experienced lower morbidity than Italian Service Units and German prisoners (see chart on page 26). The morbidity rate for Italian prisoners was about 15 percent lower than for Italian Service Units and 40 percent lower than that for German prisoners.

Morbidity among Japanese prisoners decreased in August to a figure about 45 percent below that for all prisoners.

Morbidity from injury among German prisoners decreased slightly, and that for Italian Service Units decreased about 10 percent.

Morbidity from colds, influenza, etc. among prisoners of war was reported at 42 per thousand in August or 25 percent lower than in July. The admission rate for these causes among prisoners was about 50 percent lower than for U.S. troops. The admission rate from colds, influenza, etc. was highest for Italian Service Units (63 per thousand), followed by German prisoners (41 per thousand), with both Italian and Japanese prisoners showing the lowest (30 per thousand and 12 per thousand respectively).

During August morbidity from malaria (representing predominantly cases acquired outside the United States) remained at 2 per thousand. Three new cases of malaria were reported as having been acquired in this country.

The August admission rate for diarrhea and dysentery for prisoners of war was at the low seasonal level of 10 per thousand. There were reported 8 new cases of diphtheria in August, and 49 new cases of infectious hepatitis. Morbidity from measles, mumps, and scarlet fever among prisoners remained low.

PRISONERS OF WAR (CONT'D)

During August the following cases of rare and unusual communicable diseases were reported among prisoners of war: 150 coccidioidomycosis, 4 filariasis, 1 Rocky Mountain spotted fever, 3 typhoid fever, 1 typhus fever. Of the cases of coccidioidomycosis, 138 were reported among German prisoners at Camp Cooke, Calif.

The camps reporting the highest morbidity from disease were Camp Gordon Johnston, Fla. (G); Douglas, Wyoming (G); Maxey, Texas (G); and Savanna Ordnance Depot, Ill. (ISU); all of which had rates in excess of 1400 per thousand.

The highest morbidity for injury was reported from Front Royal, Va. (G); Camp Edwards, Mass. (G); Camp Gordon Johnston, Fla. (G); and Camp Joseph T. Robinson, Ark. all with rates in excess of 260 per thousand.

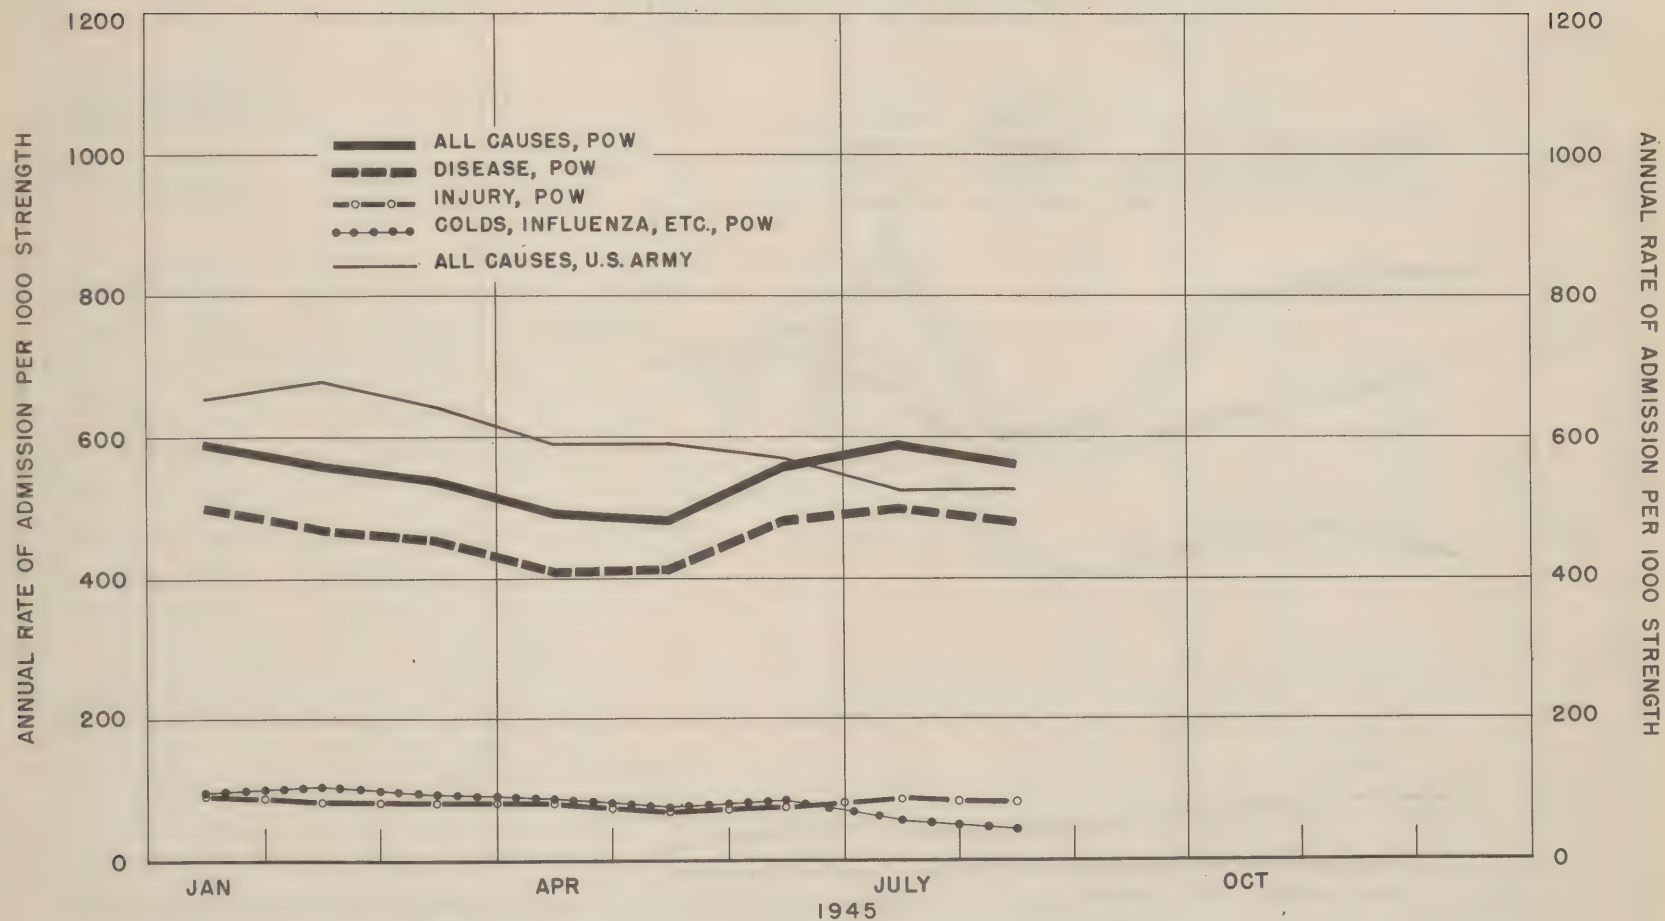

The number of prisoners of war remaining under treatment in hospital and convalescent facilities at prisoner-of-war camps as of 31 August and the corresponding rates per thousand strength are shown below. The total number of such prisoner patients at the end of August was about the same as at the end of July. Out of the 9721 German prisoner patients, 2043 were at Camp Forrest General Hospital, Tenn. and 4120 at Camp Forrest Convalescent Hospital, Tenn., thus, about 60 percent of the German prisoners remaining under treatment at prisoner-of-war camps were at these installations.

In addition to the prisoners of war remaining under treatment at the prisoner-of-war camps or special hospitals for prisoners of war there were 1332 remaining under treatment in other hospitals; of these 1212 were in General and Convalescent Hospitals (chiefly at Madigan, Bushnell, and Mason).

	Number Remaining under Treatment	Prisoner Patients Remaining per 1000 Strength
German	9721	27
Italian PW	159	13
Italian SU	240	7
Japanese	140	28
Total	10260	25
